

Honda Case Repair

The bearing pockets wear.

Many of the different Honda cases are wearing the bearing pockets. This allows the gear-trains to run off center, resulting in increased noise and decreased transmission life.

We have heard of some people who have placed shims around the outside of the bearing and then squeezed the whole mess into the case. Do it right, let us sleeve the case with a chrome moly steel sleeve

One day service is available.

Your feedback is welcome on all our products!
